

HVO Transition plan

IMPORTANT INFORMATION

From 1st April 2022, all our generator powered equipment will be supplied with HVO Green fuel.

As you will no doubt be aware that from the 1st April 2022 it will no longer be legal to use red diesel for non-road mobile machinery including mobile generators on construction sites. In order to comply with this new government legislation, we will be supplying our units with a tank of Green D HVO (Enhanced Hydrotreated Vegetable Oil). This is a fossil-free, paraffinic fuel made from 100% renewable materials.

How will this new legislation affect you using our units?

We appreciate that this change enforced by the government is going to take some time to adapt to and will change the way you have to return our generator driven units.

We want to make this as easy and painless as possible and so have produced this simple guide to how we need to work together to ensure we both comply...

Units on hire

BEFORE the 1st April 2022

If you have a unit that has been hired out with us before the 1st April 2022 then we would ask that when the time comes to off hire that you either;

- 1. Return with the fuel tank completely empty**
– we will still charge you the cost for a tank of red diesel (at the price quoted on your original quote)
- 2. Replenished the tank with Green D HVO**
(or white diesel)

Grace period

In order to give you, our customers, the opportunity to communicate these changes to your workforce (and get used to the changes in legislation), any off hires made prior to the **1st May 2022** that come back with red diesel in the tanks will be accepted with no cleaning charge.

However, please note that after **1st May 2022**, if a unit is returned with red diesel in the tank, you will incur a cleaning fee as outlined below.

Units on hire

AFTER the 1st April 2022

From the 1st April 2022 every unit leaving the depot will be supplied with a full tank of Green D HVO. This ensures both you and Davlav are compliant with the new legislation.

When returning a unit you will need to ensure the tank is replenished with Green D HVO or white diesel.

How to get Green D HVO

Getting Green D HVO is easy – our units will carry supply boxes of HVO and if you need more just call and we will have more with you within 24 hours.

Testing units for Red Diesel

As part of our off hire procedure, we will be testing the fuel tank to ensure it has not been contaminated with red diesel. So please ensure you do not put red diesel in the tank at any time.

What if a unit is returned with red diesel in the tank?

If a unit comes back with red diesel in the tank or our tests find it has been contaminated with red diesel whilst in your care, we will charge a cleaning fee to:

- Empty the tank
- Dispose of the red diesel
- Clean the tank
- Flush the engine
- Change the engine filters

Please pass this information on to the relevant people, especially your colleagues using the units
